Examiner's Amendment

Claim 10:

Line 1, replace "Previously presented" with --Currently amended--

PART I THE EXAMINER'S EVALUATION OF THE APPLICATION

SECTION A RELEVANT ART CITED BY THE EXAMINER

- 1. U. S. Patent No. 6,757,705 B1 to Pardikar et al. describes Method and system for client-side caching.*
- 2. U. S. Patent Publication No. 2002/0194382 A1 to Kausik et al. describes Method and system for efficient and automated version management of embedded objects in web documents.*
- 3. U. S. Patent Publication No. 2002/0156832 A1 to Duri et al. describes Method and apparatus for dynamic bookmarks with attributes.*

SECTION B DISTINGUISHING FEATURES RECITED IN THE CLAIMS

*The following is an Examiner's Statement of Reasons for Allowance See **MPEP 1302.14***

- 1. The primary reasons for allowance of independent claims 1-17 in the instant application is the combination with the inclusion of the following limitations: **analyzing a plurality of parts of a response to a client request to identify a plurality of attributes thereof, wherein the attributes identify a set of dependencies of the***

content; analyzing the entity tag by comparing time values within the entity tag associated with the set of dependencies to corresponding time values for the sources to determine if the cached response is valid, wherein the comparison is made without evaluating or rebuilding the response.

2. *The primary reasons for allowance of independent claims 18 and 20-25 in the instant application is the combination of the following limitations: an analyzer to analyze a plurality of parts of a response to a client request to identify a plurality of attributes thereof, wherein the attributes identify a set of dependencies of the content on sources of dynamic content; a tag analyzer for analyzing the entity tag when received from the client with a subsequent request for the dynamic content web page to determine if the cached response is valid, wherein the cached response is valid if the time values within the entity tag match corresponding time values for the sources, and wherein the tag analyzer analyzes the entity tag without evaluating or rebuilding the response.*

3. *The primary reasons for allowance of independent claims 26-27 and 29-33 in the instant application is the combination of the following limitations: program code for analyzing a plurality of parts of a response to a client request to identify a plurality of attributes thereof, wherein the attributes identify a set of dependencies of the content on sources of dynamic content; program code for generating an entity tag for a response to a client request for a dynamic content web page, wherein the entity tag identifies the sources of dynamic content in the*

response and includes the cacheability flags corresponding to a cacheability of the response and time values associated with the [[a]] set of dependencies on the sources, and wherein the response and the entity tag are cached on the client

The prior art of record including the disclosures of Pardikar et al. (6,757,705 B1), Kausik et al. (2002/0194382 A1), and Duri et al. (2002/0156832 A1) neither anticipates nor renders obvious the above-recited combination.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays should be clearly labeled "Comments on Statement of Reasons for Allowance"
